

FIELD SHEET: BIOBUZZ AUTO

Tiles are 24 in. Columns A-F left to right from the audience, rows 1-6 from the audience back. Small squares are 6 in.

AUTO is 30 s. Start with 4 POLLEN, touching a red-side wall, not in the LOADING ZONE, not touching a FLOWER. Start tiles that qualify in the planner: A4, A6, B1, C1. Pick a facing too: N (away from the audience), E, S or W. Points: HIVE TIP +20 each (first tip about 4 POLLEN, later tips about 8). PARK in the LOADING ZONE +5. LEAVE your start tile +3. POLLEN pickups: red GARDEN (A1, 4) and the FLOWERS (4 each). A launch only goes in when the robot faces straight at the red HIVE. FLOWER positions are approximate. Check them against the real field and move them on this sheet if they differ. Commands: Move forward / backward (tiles), Rotate left / right (degrees in 90s), Intake POLLEN (count), Launch POLLEN (count).

PLAN SHEET

Think first. Pencil only. Nothing here needs code.

1. GOAL: what is the most you can realistically score, and why?

2. OBJECTIVES: list everything on the field worth doing.

Objective	Points	Est. seconds	Order

3. RISKS: what could waste time, miss the HIVE, or get the robot stuck?

4. APPROACH: say your plan in one or two sentences.

5. PREDICTION: write these down **BEFORE** you run anything.

Predicted points

Predicted seconds used (of 30)

Actual (fill in after)

ROUTE SHEET

One command per row, same as the planner. Track the tile, facing, POLLEN held and the clock after each row.
